WIA Presentation
Dakota Butcher

I researched a lot of Javascript and jQuery plugins the past week. Two really caught my eye, Unslider and Remodal. I started off wanting to do Unslider but changed my mind sometime after to do Remodal. I tried them both out, Remodal was more fun and intuitive.

Remodal is a plugin that helps you create a modal on your webpage. It is really easy to use and looks really good. I would not use this in a site for a client but for personal projects or personal sites I could see it being used. I feel like it is mostly for the people who try to do the website themselves without much coding knowledge.
